

Maximizing Security & Revenue Generation At Ghana's Ports

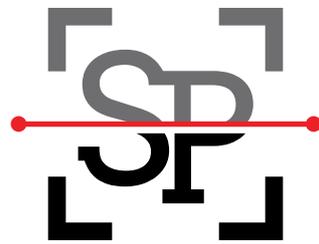

FIRE | SAFETY | SECURITY | DEFENCE

Worldwide World Class Protection

A proposal by

ScanPort

&

WESTMINSTER
INTERNATIONAL LTD

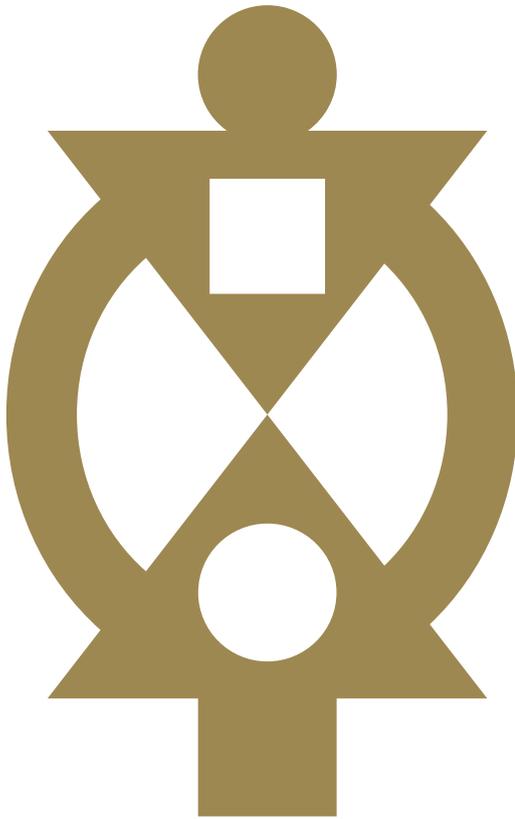

Partnering for Success

“If you want to go quickly, go alone. If you want to go far, go together.”

- African Proverb.

Rationale

Scanport has entered into a Technical Partnership Agreement with Westminster to work together in the delivery of the Container Scanning, Imaging and related services at the New MPS Terminal at the Tema Port to ensure maximization in controls relating to terrorism, organized crime, drug and contraband trafficking, economic crimes and loss of revenue.

ScanPort Profile

Scanport Limited is a Ghanaian owned business founded in 2018 and specialized in the provision of comprehensive security solutions for key national and critical infrastructure sites such as Ports, Harbours, Airports, Railway Stations, Border Crossings, Embassies, Banks etc. Scanport Limited can be located at No. 2 Second Norla Street, Labone, Accra, Ghana and contacted on +233502630660 or via our Post address P.O Box KIA 30628, Accra, Ghana.

Scanport Limited is a Limited Liability Company duly incorporated in accordance with the Laws of Ghana and guarantees that all its projects go through the requisite processes and are compliant with all applicable regulations.

Currently, our main services include; the design, construction, installation, operation and maintenance of security devices such as cargo scanners and detection machines including systems, networks, infrastructures, telecom services, communication, cameras for optical letter recognition and/or video controls; the provision of consultancy services for the handling of the inspection of personnel, vehicles and containers; the provision of cargo handling services related to customs inspection of goods and shipment through the use of security scanners; the provision of consultancy and services related to compliance with the International Ship and Port Facility Security(ISPS); and the sale and marketing of security devices and equipment.

Led by a highly experienced and dedicated team of accomplished professionals in various fields, we are without doubt the go to company for the provision of complete security services and solutions including scanning and imaging, together with consultancy, training and other similar supporting services and/or logistics.

Leveraging our key resource, our roller deck of advisors, and tapping into diverse networks around the world, we are positioned to work effortlessly with our internationally renowned and accomplished partners such as Westminster International Limited, to ensure that all our projects are successful, sustainable and mutually beneficial to all stakeholders. In fact, Scanport has a subsisting Technical Partnership Agreement with Westminster International Limited in the delivery of Container Scanning, Imaging and related services at the New MPS Terminal at the Tema Port.

We believe in harnessing, training and developing local talents and growing into a Ghanaian Company with a competitive edge in the provision of appropriate solutions to counter all likely and perceived risks such as terrorism, organized crime, drug and contraband trafficking, economic crimes and loss of revenue, considerations which are paramount to the transformation of the economy today.

Board of Directors

**Air Vice Marshal Julius
Otchere Boateng**

(OV,NDC,PSC,JSC,MPHIL)

AVM J. O. Boateng is a founding Director of Scanport Limited.

He was the Chief of Air Staff of the Ghana Air Force from May 2005 until his retirement on 31 March 2009.

AVM Boateng was a member of the Board of Directors of the Ghana Civil Aviation Authority (GCAA) from 2001 to 2007 and chaired the Board's oversight sub-committee on Security, Safety and Airport Operations during the period.

An accomplished Instructor Pilot and a recipient of a national award- the Order of the Volta (OV), AVM Boateng has held various Aviation and Security related appointments (in Ghana and with the UN) during his 36 years' service with the Ghana Armed Forces.

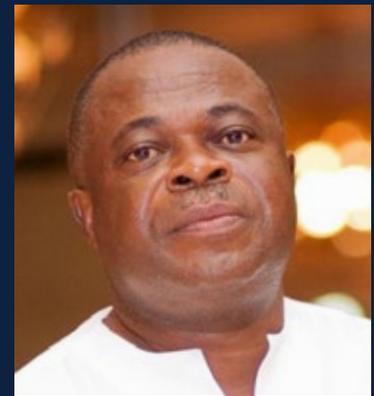

Michel Saouda

Michel arrived to Ghana in June 1984. Michel is the founder of Microcell Limited and has provided strategic direction and leadership to Microcell for the past nineteen years. His excellent leadership skills are behind the Microcell success story.

He is the Owner and Chairman of Isocele Business Services Ltd, a known IATA agent and travel agency services for the past twenty years. He was also the Managing Director of Barh-Art Furniture Company Ltd from 1993 to 1999 and was the Chairman and Executive Director of Le Magellan Ltd (Hotel and Restaurant) from 2003 to 2007.

He was also the Chief Executive Director of I-Zone Ltd from June 2011 to April 2012 and still remains an Executive Director of the board of the company and a shareholder

Kojo Ofosu-Siaw

A leader and an accomplished entrepreneur with 38 years experience in the craft of business formation, operation and

management and a strong focus on producing high achieving results. A true business enthusiast with a knack for winning

customers and growing a loyal base of clients. An effective communicator and listener leading to long established relationships

with stakeholders locally and overseas in the frozen foods industry. A highly adaptable professional with an unwavering belief in hard work, consistency and excellence.

A black and white photograph of a wooden pier at night. The pier is made of dark wooden planks and has several wooden benches along its length. In the foreground, a lifebuoy is mounted on a dark metal post. The lifebuoy is dark and has some white text on it. The background is dark, with several bright lights illuminating the scene, creating a strong contrast and long shadows. The overall mood is quiet and somewhat somber.

Experienced Partners:

Westminster Group plc

Mission Statement

The Mission of the Westminster Group Plc. and its subsidiaries is to be recognised as a worldwide centre of excellence for the provision of Fire, Safety, Security & Defence products and services.

Westminster aims to improve the quality of life of people throughout the world, regardless of race, colour or creed and will do so by providing world-class protection solutions encompassing all aspects of Fire, Safety, Security & Defence including, risk assessments, consultancy, product supply, system solutions, integration, monitoring, training and operations!

Westminster believe all citizens of the world have a right to personal safety and security and to be free from the threat of terrorism, crime, fire, accident and mishap and will assist with the development, design, installation and maintenance of appropriate solutions to counter all likely and perceived risks to the individual and their property.

Westminster International will endeavour to achieve this goal by acting in a professional and responsible manner, treating all people with equal courtesy and respect at all times.

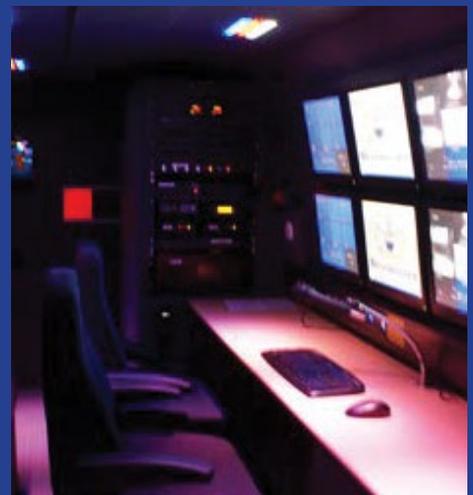

Security Services & Equipment

Security Solution: Surveillance Vehicle - Africa

Westminster International was awarded a contract from a National Government to supply a range of bespoke mobile surveillance vehicles and equipment to assist with urban policing and state security. The vehicles involve audio & visual surveillance, covert tracking and secure communication systems.

Westminster has also been contracted by the same Government to build a state of the art Command & Control centre from which these vehicles and other security solutions can be monitored and controlled.

Company Overview

Based on our experience with Westminster we can unreservedly recommend the company to anyone who needs their services.

Constantin Vasile, Ph.D. - International Atomic Energy Agency

The Westminster Group Plc. Is a highly experienced and internationally acclaimed managed services and technology Group operating worldwide through an extensive network of agents and international offices in 50 countries.

Managed Services Division

The division is focussed on providing long term managed services contracts and the provision of manned services as the management and operation of complete security services and solutions, together with consultancy, training and other similar supporting services.

Services include comprehensive protection solutions to key national and critical infrastructure sites such as airports, ports & harbours, railway stations, border crossings and other such facilities. with Westminster providing the investment in equipment and personnel as well as providing the required expertise to operate and run the security operation under long term contracts.

Westminster Aviation Security Services Ltd:

Westminster Aviation is a specialist provider of complete security solutions to the aviation and transportation sectors protecting infrastructure, operations, assets and the travelling public throughout the world.

Providing a wide range of equipment, services and solutions including the manning and operation of complete airport security facilities, the provision of specialised screening of people, baggage and cargo, surveillance, monitoring, detection equipment and physical security.

Westminster can also provide a secure international 'meet and greet' service, emergency repatriation flights, emergency aid distribution and relief flights.

Defence Services & Equipment

Defence Solution: Diver Detection & Disruption System - UAE

Westminster received an urgent request to design a solution to protect a Harbour area and given that a Summit was due to take place in the following month this was a monumental assignment as normally diver detection systems take several months to design and implement – in this case there were just a few weeks. As Part of the solution Westminster also installed its underwater diver communication and disruption system allowing operators to communicate with any approaching divers and if they failed to leave the area, generate disruptive tones causing them to surface.

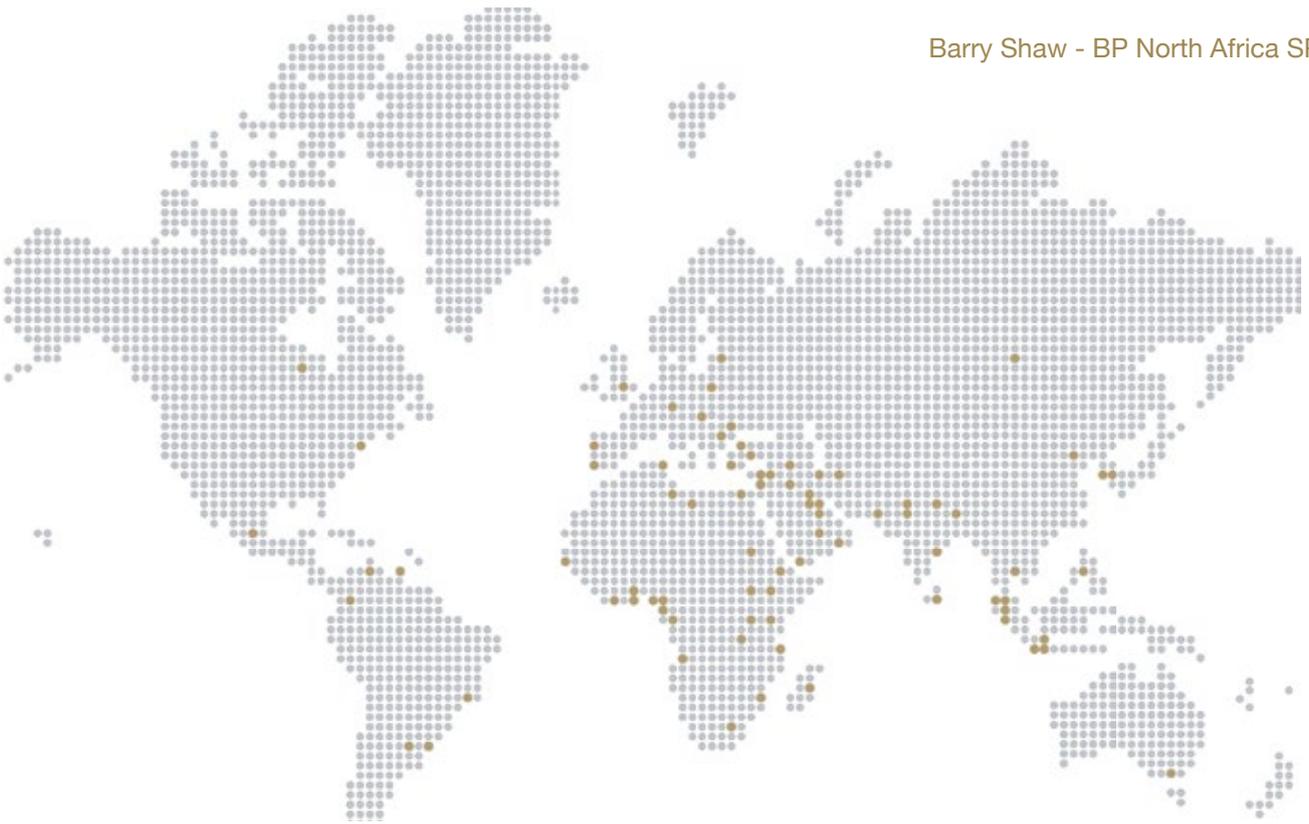

24 Hour Worldwide Protection

Worldwide **World Class Protection**

“ We purchased blast protection from Westminster International Ltd. I would like to take this opportunity to say thank you to Westminster and their staff for being very helpful on all communications between us and with their flexible approach to helping us get the job done. ”

Barry Shaw - BP North Africa SPU

A growing international presence in over 50 countries

Fire Services & Equipment

Fire Solution:
Fire Detection System -
United Kingdom (UK)

RMS was awarded a contract to supply fire detection and other equipment to an academy site in the UK. The site comprises of four blocks and an enterprise area, every block has its own addressable fire alarm system, networked to form one complete system. The Academy has installed automatic detection and manual call points to activate sounders and plant shutdown. The System is also integrated with a Class Change System which sends an input at allotted times to the fire alarm to activate the sounders utilizing a different sound so that the pupils are alerted to the fact that its time to change class.

Our Sectors

“Throughout the project from initial site visit, Westminster communicated the product and processes required very professionally, and the installation team worked in a efficient with high quality workmanship. I would not hesitate in using Westminster again or recommend to others their services.”

Alan Jones - Aztec Group (UK) Ltd

Wide Sector Coverage

Airports & Aviation

Westminster's wide portfolio of Fire, Safety, Security and Defence solutions and expertise in the provision of airport security is helping to protect airports throughout the world.

Banking

Westminster can provide security solutions for every aspect of the Banking and financial services industry.

Border Security

Westminster can provide a wide range of Border Security solutions for the surveillance, detection and screening of persons crossing national land, sea or air borders.

Buildings & Compounds

Threats to buildings & compounds are many and vary from the tangible to intangible. Westminster offers a wide range of equipment and solutions to counter such threats; from leak detection to blast protection.

Critical Infrastructure

Westminster has an extensive portfolio of solutions to protect critical infrastructure, such as electricity generation and distribution, water supplies, transport, tunnels and bridges.

Embassies

Westminster has a wide portfolio of products and services both for the protection of Embassies and Embassy staff worldwide.

Governments

Westminster is able to assist Government and their agencies to deal with various security issues, whether it be protecting buildings, infrastructure, information or individuals or the gathering of intelligence or provision of systems for the fight against crime, insurgency and terrorism

Hotels, Clubs, Casinos & Bars

Anywhere where there are large numbers of people there is the potential for disturbance, unrest, fraud, criminal and even terrorist activity. Westminster offers a wide range of products and solutions to assist the management of these threats and to protect guests and patrons accordingly.

Military

Westminster can supply a wide range of non-offensive military equipment and defence solutions such as RF jammers, armoured vehicles, mine detection and disposal equipment, protective clothing, ID systems, medical and trauma packs, survival equipment, diver detection sonar and perimeter detection systems.

Non-Governmental Organisations

Westminster has extensive experience of providing safety and security solutions to protect NGO's such as the UN or World Food Programme in hostile areas around the globe.

Oil & Gas

Westminster can provide expert guidance on oil & gas production plants, pipeline infrastructure, pumping stations, terminals and even shipping and has a wide range of specialist fire and security solutions for the protection of such facilities, including advanced pipeline protection solutions.

Police & Law Enforcement

Westminster offers a range of covert and overt scanning and tracking solutions, data gathering solutions and protective equipment to assist the security services carry out their vital roles safely and efficiently.

Ports & Harbours

Westminster has a wide range of security and defence solutions which can be deployed to

protect ports & harbours including both land and marine based systems.

Power Stations & Utilities

Westminster can protect power stations & utilities using a range of specialist solutions including perimeter security, surveillance systems and specialist fire detection & suppression systems.

Prison & Detention Centres

Westminster provides a range of effective security solutions for prisons & detention centres to control and monitor the flow of people moving in and out of the premises, as well as within the facilities themselves.

Schools & Hospitals

There is a growing concern around the world that schools and colleges are now becoming subject to violent crime. Staff in the healthcare sector are regularly subject to violent threats and attack from patients and guests. Westminster can advise on and supply a wide range of solutions to address this problem.

Theatres, Stadiums & Arenas

Large entertainment venues provide a unique set of safety and security challenges. Westminster can provide a vast array of security and safety solutions to help minimise risk and disruption and also provide structured and comprehensive training of officials in how to cope with threats and emergencies as well as risk assessment planning.

VIP & Personal Protection

Westminster provides comprehensive solutions for VIP protection. Individuals themselves can be protected using Westminster's specialist and discreet personal security and close protection teams.

Covering every area of the security spectrum.

Safety Services & Equipment

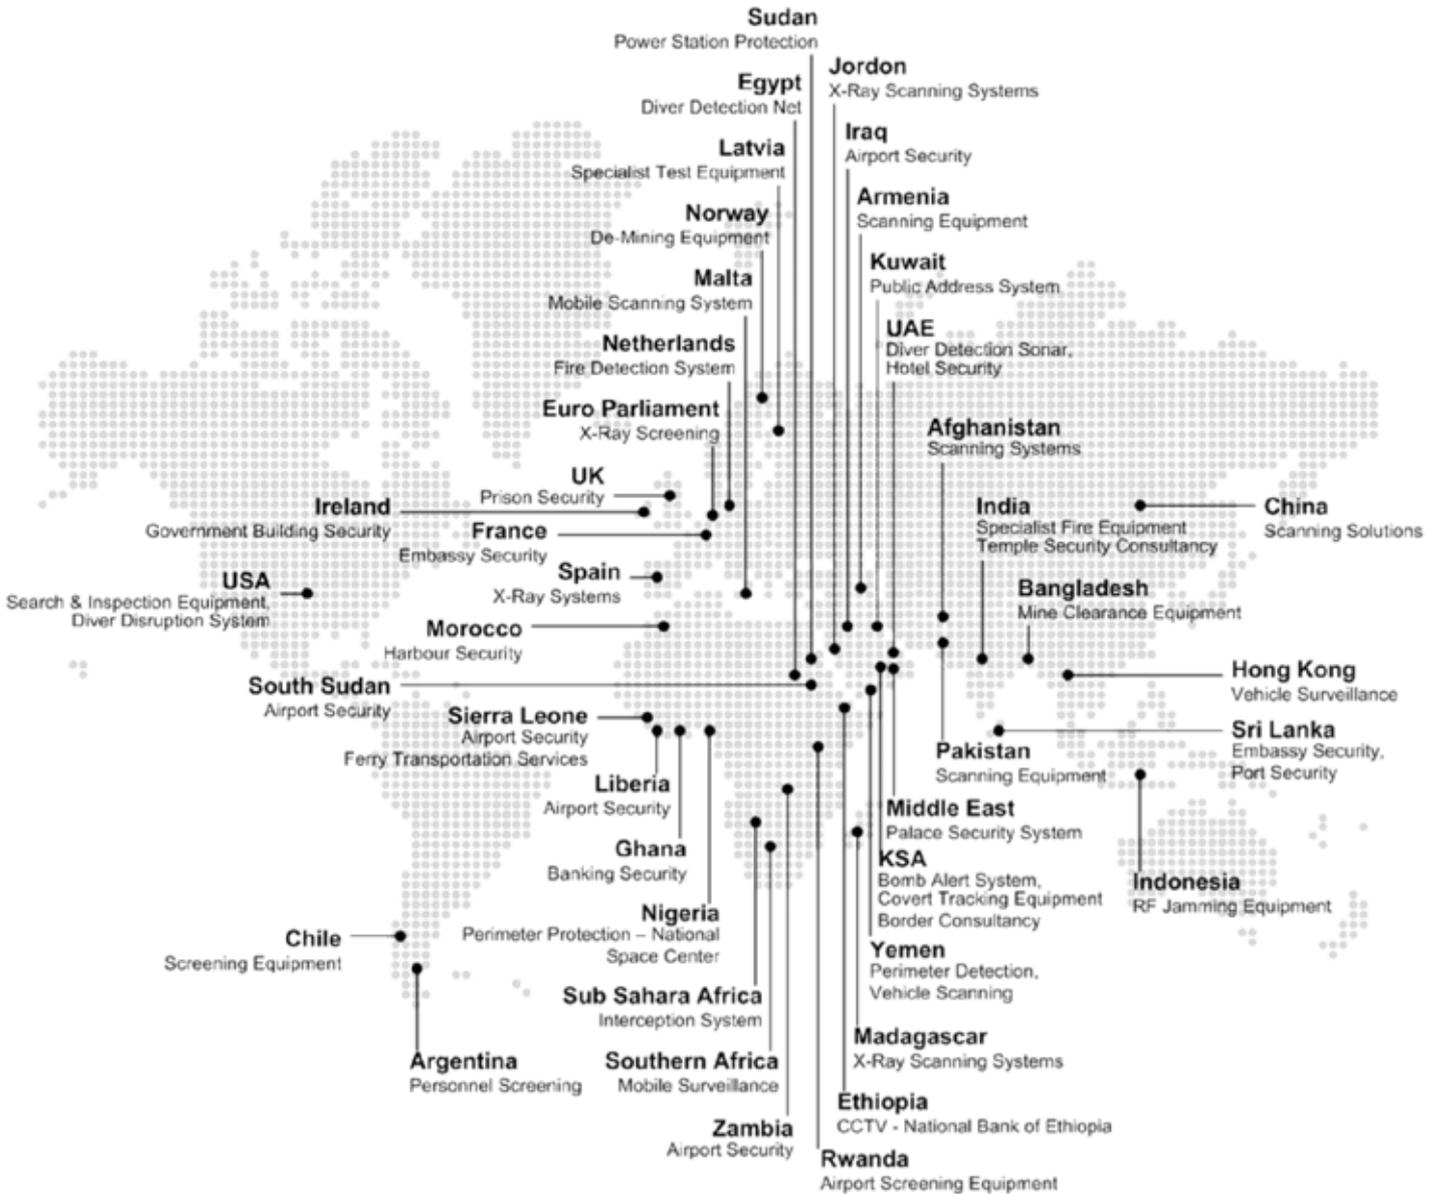

Safety Solution: Fever Detection Equipment - North Africa

Westminster secured a contract to supply a number of Westminster's WG520 specialist Fever Detection Systems for public buildings in North Africa, which will be used to screen visitors for flu epidemics so that appropriate action can be taken. The portable WG520 Fever Detection System identifies persons who may be suffering from common influenza, SARS and other flu variants such as Avian flu, Bird and Swine flu etc. by identifying individuals whose body temperature exceeds a predetermined threshold. The WG520 is suitable for mass screening at airports, ports, stadiums and public buildings.

Airport Security Services

Airport Solution: Full Airport Security Operation - West Africa

When the Airports Authority of an African country decided to outsource its AVSEC security services at its international airport, Westminster Aviation Security Services (WASS), as a leading provider of aviation security worldwide, were the natural choice! WASS took over and retrained the existing workforce, brought in a specialist management team experienced in airport security, introduced new policies, procedures and standard operating procedures (SOPs), upgraded existing screening equipment and introduced a wide range of other high performance detection and surveillance equipment such as CCTV, Access Control, Explosive Detection, Vehicle search, perimeter fencing and intruder radar detection etc. Also WASS has assisted with the creation of the Airport Security Plan (ASP) and Emergency Exercise drills. Within months of WASS's deployment security at the airport had significantly improved and new carriers are looking to commence operations.

Our Activities

“ We would have no hesitation in purchasing future equipment from you or recommending your organisation to others ”

In November 2017 she joined Huntsworth PLC as Senior Group Advisor.

Worldwide Project Examples

Project Example

United Nations Mission in Sudan UNMIS - Sudan

The Task

The UN Advance Mission in Sudan (UNAMIS) was set up following the adoption of UN Security Council Resolution 1547 on 11 June 2004.

It was given the task of preparing for a full-fledged UN peace support mission to be deployed during the interim period following the signing of a Comprehensive Peace Agreement (CPA) between the Government of Sudan and the Sudan People's Liberation Movement/Army (SPLM/A).

Westminster International was awarded a major contract to provide a sophisticated electronic security surveillance system to protect the new United Nations premises in Khartoum - Sudan.

The project consists of a number of high performance surveillance cameras capable of observation, both internally and externally around the complex, in zero lighting conditions as well as in the extremes of the environmental weather experienced in the region.

The system, which will be undertaken by Westminster's specialist technicians based in the Sudan in association with Westminster's local agents, will provide a high level of security to the complex 24 hours a day against attempted intrusion, infiltration or terrorist activity.

The system is monitored and controlled from a sophisticated Control & Command Suite with all camera pictures and recordings available, via secure encryption, to the UN command network.

Project Example

Canadian Nexen Petroleum - Yemen

The Task

Nexen Inc – Perimeter Protection Solutions

Nexen Inc. is a global energy leader whose core business activities are the exploration, development, production of crude oil, natural gas and power.

Yemen has been one of Nexen's most significant international regions since first production on the Masila Block in 1993 and the company operates the country's largest oil project.

Following a suicide bomb attack in September 2006 on Nexen's coastal oil pumping facility at Ash Shahir in the eastern Yemeni governorate of Hadramawt, security at the company's various plants and operations were re-evaluated. Part of this evaluation process involved a visit to Westminster's UK headquarters and test grounds for discussions on various protection solutions and demonstration of a wide range of equipment.

Following this evaluation and a subsequent international tender process, Westminster were awarded a contract for the supply of specialist long range perimeter fence detection solution to protect several of Nexen's production sites.

Westminster's specialist perimeter detection system can be fitted to perimeter fencing structures or covertly buried below the ground, providing very high levels of detection whilst advanced filtering technology eliminates most causes of false alerts.

The system is capable of monitoring tens or even hundreds of kilometres of perimeter or border fencing without the need for any 'in field' electronics, power supplies or analysers and yet can pinpoint the location of any incident to within a few metres.

The contract, which was managed in conjunction with Westminster's Middle East office involved several months work and was completed in 18 Months.

Project Example

National Bank of Sudan - Sudan

The Task

The Bank of Sudan's new headquarters building is a 10 story complex consisting of several large towers and full height atrium which is situated close to the intersection of the White and Blue Niles and is one of the largest and most technologically advanced, multi storey buildings in the Sudan. The impressive building was designed by leading consultants, Hamdi Consulting Group of Khartoum.

Westminster International Ltd. was awarded the prestigious contract to provide the extensive security systems and equipment required to protect the new Headquarters Building against both criminal and terrorist attacks.

Westminster was chosen to provide the security protection services on the basis of superior design and performance criteria against fierce competition from a number of international companies.

The contract involved numerous electronic systems integrated into a common Control & Command suite including a Fire Suppression System, Intruder Detection Systems, Access Control, Perimeter Detection Systems, CCTV surveillance, Walk Through Metal Detection Gates, X-Ray Baggage Scanners, Flood Detection Systems, Time & Attendance Equipment & Entry Barriers etc.

Westminster, in addition to providing the electronic protection systems, also provided the vault doors and cash in transport equipment together with specialised fork lift trucks for use in the vault areas.

Project Example

Complete Airport Security - West Africa

The Task

Following a long tender process Westminster was awarded the contract to take over the complete security operations within a West African International Airport.

The project is, a 15 year contract to provide the complete ground security services at the airport, including the perimeter security of the airport, passenger security throughout the terminal and passenger and baggage screening during check-in, security checkpoint and prior to boarding.

The project covers both the provision of the AVSEC security guard force, the development and implementation of robust and internationally recognised procedures and systems and the installation of state of the art detection and surveillance systems & equipment and the ongoing maintenance and upgrade of such.

As part of the contract Westminster deployed a highly experienced management team

and took on the 100+ strong security team. Westminster have implemented advanced training programs to increase the knowledge and performance of all staff.

Westminster has also provided a dog detection team trained in the detection of explosives and narcotics quickly and effectively increasing the security of air travel. This deployment whilst not a requirement of the contract has been implemented by Westminster as a commitment to our vision of developing a internationally recognised standard of aviation excellence.

In addition Westminster, through our systems division Westminster International Ltd, is implementing a wide range of advanced security solutions including CCTV, access control, advance x-ray equipment for both hold and carry-on baggage, a state of the art dual view cargo scanning system, perimeter security; including high security fencing with fibre optic detection system, ground radar detection and long range thermal surveillance; and many other such technologies.

100 Years of the
CHANCERY

Project Example

British Embassy Paris - France

The Task

The British Embassy Paris selected Westminster International to provide a solution to physically secure the three entrances into their building from vehicular access.

Following a site survey, Westminster recommended that electrically operated, remote controlled rising bollards be sited at each entrance so as to create dual security of both an inner and outer security barrier to combat vehicle borne attacks.

Fixed static bollards provide additional protection from Vehicle borne improvised explosive device (VBIED) by keeping vehicles away from Vulnerable areas.

With the British Embassy occupying a strategic position in the centre of Paris aesthetics of the proposed solution was also a key consideration.

The security bollards, which are controlled by an entrance automation system, allow authorised personnel to enter safely and securely whilst maintaining security against unauthorised vehicle entry at all times..

Westminster's range of security bollards are designed and manufactured by engineers with significant experience in the fields of high security and access control. Security bollards are a highly dependable yet unobtrusive form of security which will easily interface with the wide range of security solutions offered by Westminster.

All of our bollards and blockers provide highly effective protection for high security establishments, iconic buildings, ports harbours, airports and critical infrastructure.

Project Example

Covert Surveillance Vehicle - East Africa

The Task

Westminster was awarded a contract from a African National Government to supply a number of bespoke mobile surveillance vehicles and equipment to assist with urban policing and state security.

The vehicles which involve the deployment of a wide array of audio & visual surveillance, covert tracking and secure communication systems. These systems include covert vehicle mounted surveillance cameras, covert audio recording equipment two way van to operative communication systems with body worn surveillance cameras all transmitted in real time to the vehicle.

The interior of each vehicle is fully equipped to allow the monitoring of all audio and visual feeds as well as incorporating advanced

tracking and security management software for detailed incident management. The vehicle is fully covert with the interior fully shielded from heat, RF and other interference and detection and is fully equipped with climate control.

As part of the contract Westminster has provided a state of the art Command & Control centre from which these vehicles and other security solutions are monitored and controlled.

The bespoke mobile surveillance vehicles are linked in real time with the control centre by fully mobile satellite communications allowing the Command & Control centre to fully manage operations from multiple vehicles simultaneously allowing for large scale policing operations to be effectively implemented.

Project Example

Consultancy Services - Saudi Arabia

The Task

Westminster was awarded an ongoing contract for several years from Mobily, part of the Etisalat group, Saudi Arabia to carry out a series of consultancy project for the Saudi Arabian mobile phone giant.

The consultancy projects focused on Mobily's infrastructure across Saudi Arabia covering hundreds of buildings and compounds both security and building management systems and the requirements for countrywide monitoring and reporting.

In addition Westminster have been requested to assist with the relocation of the HQ into their new prestigious complex consisting of three tower buildings. Looking at the existing security infrastructure and how this can be enhanced and expanded to suit their profile, including the deployment of security screening and additional advanced surveillance technologies.

Project Example

Specialist Marine Security Net - Egypt

The Task

Westminster International were awarded a prestigious contract to protect the new Nagaa Hammadi Dam complex on the river Nile in Egypt.

The contract is to supply and install an advanced security net across the river Nile; to prevent access to the dam from either vessels or divers and to protect the hydraulic control structure from any floating or submerged objects.

The security net comprises a steel wire mesh with an advanced fibre optic detection cable attached. Any attempted attack on the net will signal an alarm and indicate the location of attack within the security control room. The net, spanning the entire width of the river Nile, will be fitted with an automatic gate which can be remotely opened and closed from within the control room.
