

WESTMINSTER
GROUP PLC

Company Overview

Worldwide world class protection

Mission statement

Westminster believes
all citizens of the world
have the right to personal
safety and security

To be free from the threats of crime and terrorism particularly when travelling. The Mission of Westminster Group Plc. Is therefore to improve security and the quality of life for people throughout the world, regardless of race, colour or creed and will do so by the provision of advanced security solutions and long-term managed services.

Westminster will endeavour to achieve this goal by acting in a professional and responsible manner, treating our employees, customers, suppliers and partners with equal courtesy and respect at all times.

Peter Fowler
Chief Executive Officer

Who we are

The Westminster
Group is a global
security and managed
services group

With an extensive portfolio of equipment, services and solutions to meet client requirements anywhere in the world. Solving security problems for governments, military, non-governmental organisations (NGOs), air and seaports, critical infrastructure and major organisations and corporations worldwide.

The Group's principal activity is the design, supply and on-going support of advanced technology solutions and the provision of long-term managed services contracts.

Where we are

Our global presence

The Westminster Group Operates worldwide through strategically located international offices, agents, and partner companies in over 50 countries, including a significant presence in Africa, Middle East and the Far East.

Wherever you are based Westminster can provide a solution for your requirements.

Offices

UK | France | Germany | KSA | Ghana | Sierra Leone | DRC | Liberia

Our Divisions

Technology & services

The Group's various operating companies are structured into two vertically integrated operating divisions, Services and Technology focussed on delivering products, services and solutions to our three key market sectors

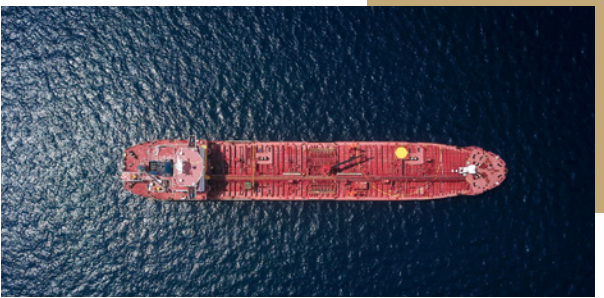

Land

Governments, organisations, businesses and infrastructure across the globe face an ever growing need for effective security solutions.

Sea

The growth of shipping around the world and the globalisation of the container business has brought its own security problems and increased threats to Ports and Harbours worldwide.

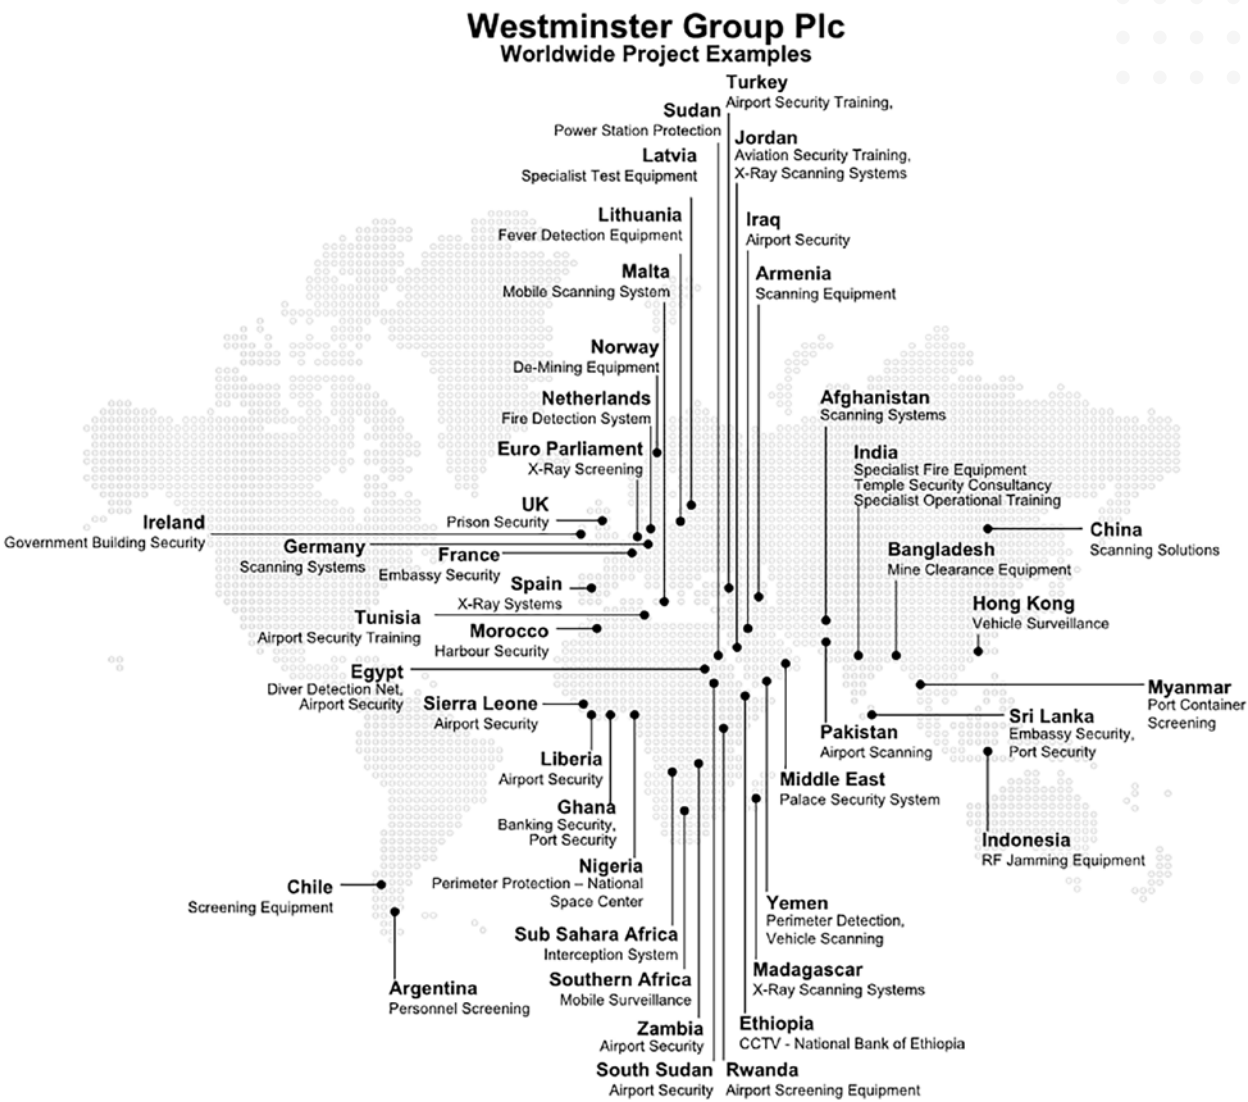

Air

The evolving threat within aviation presents a continuous challenge but every airport operation remains a potential terrorist target and now more than ever effective security is an absolute requirement.

Our Experience

Examples of our worldwide projects

“Based on our experience with Westminster we can unreservedly recommend the company to anyone who needs their services.”

CONSTANTIN VASILE, PH.D. - INTERNATIONAL ATOMIC ENERGY AGENCY

Our expertise in

Technology

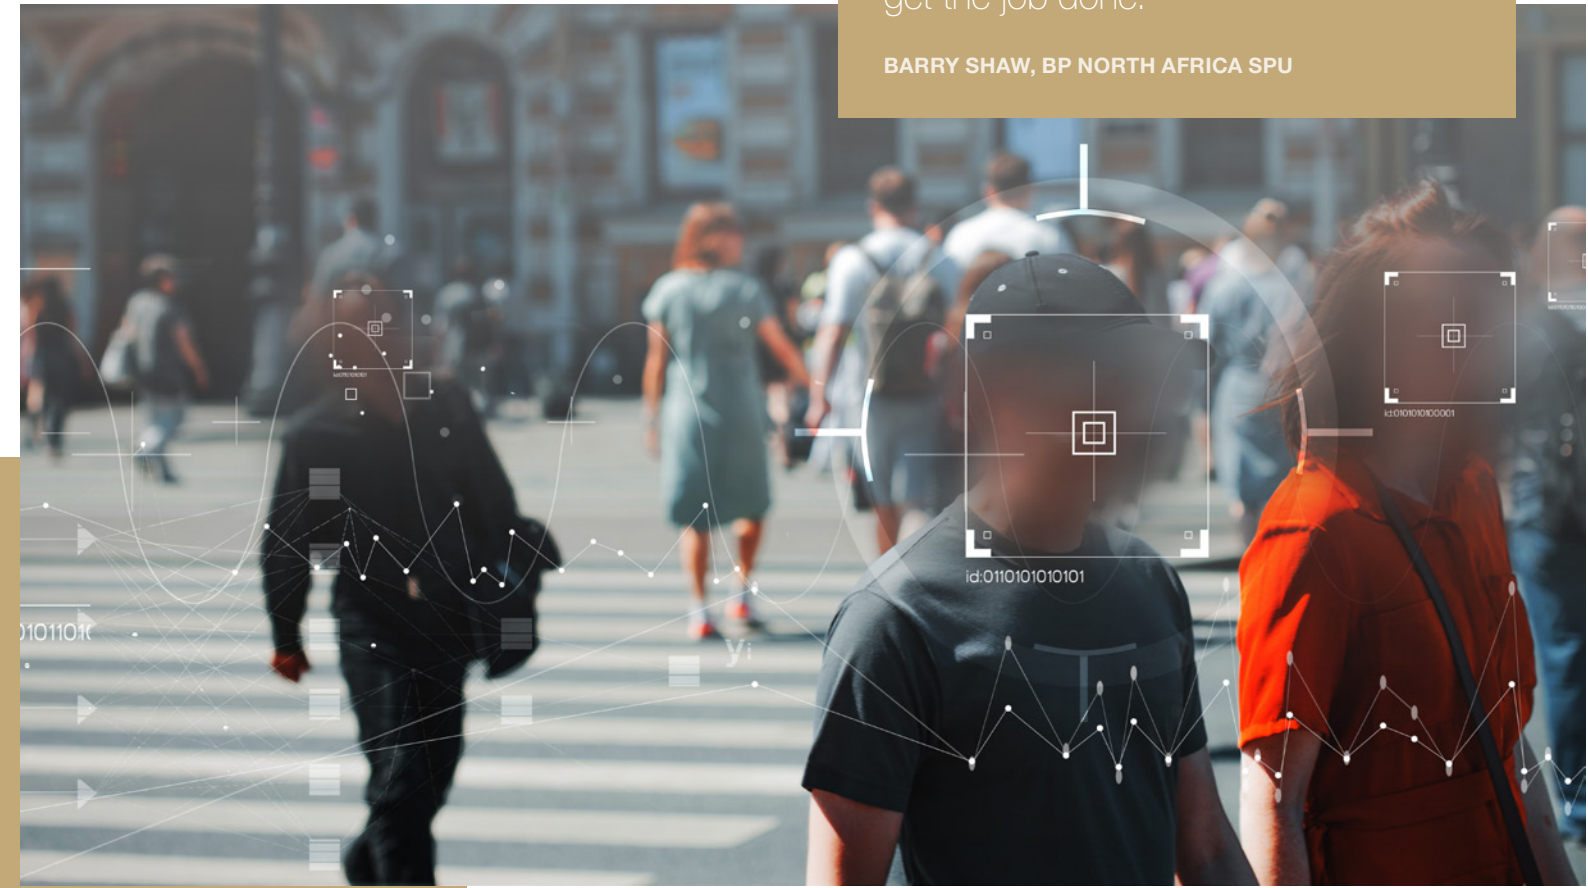

Westminster has one of the world's largest portfolios of security products and systems which can be delivered to clients anywhere in the world.

Equipment

- Screening & X-Ray
- Detection Equipment
- Surveillance Equipment
- EOD/IEDD Protection & Detection
- Fire Detection & Testing
- Vehicle & Pedestrian Management
- Inspection & Search

“We purchased blast protection from Westminster International Ltd. I would like to take this opportunity to say thank you to Westminster and their staff for being very helpful on all communications between us and with their flexible approach to helping us get the job done.”

BARRY SHAW, BP NORTH AFRICA SPU

Managed services

A range of Managed Services programmes providing an efficient and cost-effective way to stay up-to-date with the latest security requirements.

Westminster provide governments, organisations and businesses with a means to stay up-to-date with the latest security requirements, technology and the required level of technical expertise, knowledge and support need to run world class security and safety operations, at little or no cost to themselves.

Westminster will provide all the necessary investment and expertise, best in class equipment, training and maintenance services together with any required management support for the duration of the contract period, typically between 10 – 20 years.

Programmes can include Build-Operate-Transfer (BOT) or Public-Private-Partnership (PPP) schemes as well as bespoke schemes to suit client's particular needs and can be delivered anywhere in the world.

Such schemes are particularly suitable for ports and airports, where Westminster's programmes provide the additional expertise to assist clients' compliance with international regulations and standards, however the programmes are equally effective with other sectors.

Airports

Whilst airport security will always remain the responsibility of the State, the growing requirement to keep up with the expanding security infrastructure is putting a big strain on states, leading to a failure to properly secure these vital transport links.

With Westminster there is an opportunity to engage in a Build, Maintain & Train (BMT) contract and work with a world leading aviation security specialist.

Buildings & concierge

In these times of heightened security many buildings are installing advanced security and screening equipment. But often the security or concierge teams are not fully qualified for their new expanding roles. Many security guards are simply pulled from the street and put in a uniform and are ill equipped to deal with the security risks posed.

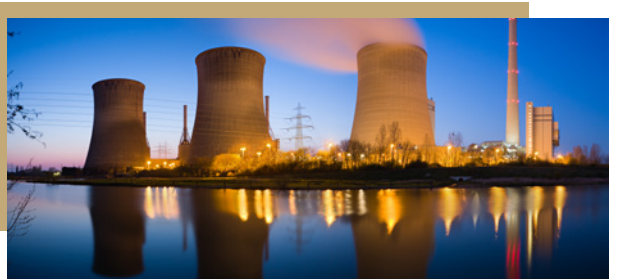

Westminster has the solution to these issues and can provide a guarding or concierge service with teams fully trained to aviation standards and with the backup required from an internationally recognised security provider.

Ports & harbours

The growth of shipping around the world and the globalisation of the container business has brought its own security problems and increased threats to Ports and Harbours worldwide.

Westminster can provide complete security packages for various elements of the port security plan. Security packages are completely bespoke and designed to suite the port and the operating environment without sacrificing quality and security.

Critical infrastructure

Whether an incident is due to theft or terrorist activity the results can be catastrophic both financially and socially and can take years to recover. It is vital to protect Critical Infrastructure assets that are essential to the functioning of society and the economy.

Westminster can provide a complete security management package for all types of critical infrastructure bespoke developed to suit the environment and risks involved.

Guarding

The Westminster Group has extensive experience providing guarding services across a broad spectrum of sectors and services.

Including the provision of fully trained airport security teams, high value asset protection, site guarding, vehicle & k9 patrols and concierge services.

With the full suite of products and services available across the group, Westminster can tailor a package to suit any requirement. Whether it is the provision of a single guarding function or a fully trained search and screening team along with the x-ray and metal detection equipment providing complete facility security.

- ✓ Static guarding
- ✓ Remote area security
- ✓ Event security
- ✓ Vehicle & k9 patrols

Static Guarding

Static Guarding is a vital part of any business that requires a constant security presence. Not only must guards have the relevant qualifications and natural ability to secure premises during overnight deployments but guards are often required to operate as a receptionist or concierge working as the customers' initial interface on site.

Remote Area Security

Protecting large remote locations is not typical of any other form of security, because in rural locations with large open areas criminals have a much safer haven to carry out their operations.

Event Security

- Car Park & Entry Control
- Crowd Control & Search
- VIP Escort and Close Protection

Aviation support services

Ensuring the preparation and the monitoring of flight operations, handling, regulations, training, chartering and all other ancillary services.

Westminster are able to supply a wide range of specialist services to the aviation and the humanitarian logistics sectors. Including supplying a simple flight plan, administrative procedures, over flight negotiations or the complete undertaking of flight operations. All with the single aim; to make your flight a success whilst saving you time.

- ✓ Flight operations & handling
- ✓ Regulation compliance & documentation
- ✓ Crew training
- ✓ Chartering

Support services

In a highly competitive environment, airline companies have to focus on fleet management and on the satisfaction of their clients. Your profession is governed by time, quality and safety factors. In order to enable you to optimise them, Westminster undertake all administrative and operational aspects of your business.

Specialists in support services, Westminster ensure the preparation and the monitoring of your flights: operations, handling, regulations, training, chartering and all other ancillary services.

Westminster's agents are mostly drawn from airline company operations services. Emanating from different backgrounds (scheduled airlines, business aviation, private aircraft management, cargo airlines, etc.); their wide and diverse experience bring huge benefits to Westminster expertise.

Their common point: an ability to meet simultaneously the demands of airline company commercial managers and of the airline navigation authorities.

"This is to confirm that, in my opinion, the contribution made by Westminster Aviation Security Services Ltd. at Freetown International Airport has resulted in a significantly increased level of security that is now equivalent to European standards and which provides confidence to British Airways in support of operations to Sierra Leone. BA also recognises the partnership approach taken by WASS with customers in support of delivering secure operations."

ANTON DE RIDDER, BRITISH AIRWAYS

Maintenance

Security and safety equipment fulfill a vital role in maintaining the safety and security of people, buildings and infrastructure. It follows therefore that to remain effective, dependable and trouble free such equipment should be regularly and professionally calibrated and maintained.

Westminster's experienced technicians are on hand to provide various cost-effective practices to keep operational equipment performing the required functions during the products life cycle. Testing, inspections, servicing and commissioning are all part of Westminster's maintenance offering regardless of where the product was purchased from. Westminster is a specialist maintenance provider of Airport Scanning Equipment, Metal Detectors and Explosive Detection Systems.

- ✓ Routine Maintenance & Servicing
- ✓ Emergency Response & Repair
- ✓ Warranty Repairs & Parts Replacement
- ✓ Equipment Hardware & Software Upgrades

Westminster is able to plan detailed schedules for Planned, Predictive and Condition Based maintenance profiles for your technical equipment. Working closely with clients and customers Westminster's Engineers will use data-based understandings of the equipment and advise on what schedule will meet the requirements for the products to continue to have the most effective performance.

Westminster has a long history of dealing with mission critical equipment with the vast majority being from the cutting edge of technology of its time, that is still true to this day. The upkeep of the products specialist instruments, industry regulations and warranties are paramount to the operational effectiveness and security of the companies that we have serviced for twenty years.

We support and maintain your security and safety equipment regardless of its origin.

Solutions

Training

Westminster can provide tailored training courses designed to meet your exact requirements.

Training provides the foundation to the successful and effective implementation of any procedure and empowers staff with the knowledge, skills and ability to be able to carry out the roles expected of them.

Westminster's training programmes are developed on a modular framework that targets both the individual and operational needs. A blend of appropriate classroom and extended practical knowledge provides understanding, resulting in skilled and able workforce.

All training is delivered by an industry qualified and internationally experienced team who have spent many years working in diverse operations around the world. Using this experience and first hand familiarity to create environments that deliver realistic and relevant training.

From experience, this approach represents a far more effective way of raising security awareness, rather than simply delivering "generic theories".

Westminster provide a wide range of courses including:

- Aviation
- Cargo
- CNI, Corporate & Events
- Guarding
- Health & Safety
- ICAO (ASTC-Bahrain)
- Maritime
- SIA
- Specialist

Solutions

Online training

Providing a cost-effective training solution with greater flexibility to support staff and operational requirements.

Our online training will allow simple access to industry-leading training, delivered at a pace to suit individual learners and tailored to personally enhance knowledge, skills and the ability to carry out roles effectively.

A comprehensive portfolio of Computer Based Training (CBT), to provide a multi-skilled and competent workforce.

- Aviation
- Health & Safety
- Dangerous Goods
- Corporate and Events
- Critical National Infrastructure (CNI)

“Westminster deliver a comprehensive portfolio of aviation and non-aviation security courses.”

P MORTON, TRAINING & COMPLIANCE DIRECTOR

Tailored courses designed to meet your exact requirements

World class security

Systems

The Westminster Group Plc is a trusted global brand delivering strategic security systems, managed services and best in class equipment to keep people safe, secure assets and maximise prosperity around the world.

The Westminster Group grew from a UK national security company, which refocused in October 2000 to take on the growing international security opportunity. Since that point the company has invested in business development and grown into a worldwide global brand in the security sector.

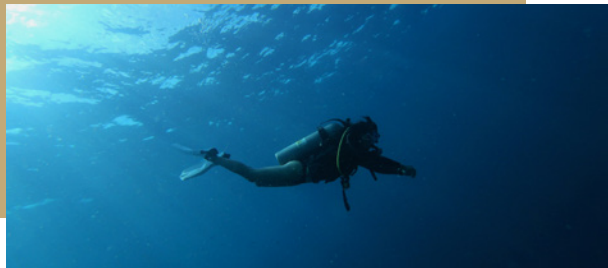

- Maritime Security
- Surveillance
- Perimeter Security
- Access Control
- Pipeline Security
- E-Gates
- Blast Mitigation
- Anti-Drone
- Fire Detection & Suppression

“We strive to always deliver a best in class service within the security and safety sector.”

PETER FOWLER, CEO

CCTV Surveillance is a widely used security technology.

Maritime security

A complete range of systems for all maritime and underwater security requirements.

- Port & Harbour Security
- ISPS Code Compliance
- Diver Detection & Communications
- Floating Barriers
- Marine Radar

Surveillance

Surveillance covers a wide range of systems which Westminster are able to supply.

- CCTV Surveillance
- Thermal Surveillance
- Analytics
- Standoff Surveillance
- Tracking

Perimeter security

The level of protection afforded to any given building or area is normally determined by the level of risk from intrusion or other criminal activity and ideally will comprise of several different but complimentary 'layers' of protection.

In this respect, Perimeter Protection, in its various forms, is the ideal first level of protection; providing both an early warning of attempted intrusion, as well as deterring and/or delaying entry of intruders.

Access control

Access Control is, quite simply, a means of managing the access of people and vehicles, where appropriate, to buildings, car parks, vulnerable or sensitive areas, lifts, vending machines and other electronic equipment.

Entry Control has always been an important factor in the fight against crime, but at a time of economic difficulty and widespread international tension, it is even more important to be security conscious.

Border Security

National borders, whether at airports, seaports, or on land, present a unique set of security challenges.

Westminster are able to advise on and provide a complete range of solutions from long range perimeter detection systems for the physical border; people, vehicle and container screening for checkpoints; and identity checking systems for customs and immigration purposes. resulting in skilled and able workforce.

WG ID Border Control Immigration Solution

The WG ID Border Control Immigration Solution can be deployed as a stand-alone or multiple location integrated system.

At the immigration control point the system will be used to:

- Capture photos of travellers;
- Interface with passport readers to extract bio-data from passports;
- Open / read ICAO chips;
- Provide reports against data sets;
- Record and store arriving and departure details for passengers;
- Swipe travel documents;
- Verify or register biometrics such as finger prints.

The captured information is immediately used to:

- Check against profiles;
- Check against watch lists;
- Check against visa information;
- Highlight and displays any history on the travel documents;
- Link a traveller to specific flights or airlines;
- Store data locally and if required share with other organisations globally.

WG Advanced Passenger Information (API) Solution

The WG Advanced Passenger Information Solution can be deployed as a stand-alone or multiple location integrated system.

The solution extends the features of WG ID Border Control Immigration solution incorporating Advanced Passenger Information controls.

Functionality:

- Accurate passenger data for both individual flights and travel in/out of the country;
- Can link to Interpol to verify passengers and travel documents;
- Extends Border Control to the passenger's point of departure;
- Improves passenger experience whilst increasing throughput.

Advance Passenger Information (API)

The API module accepts inputs from various forms of transport carriers to process Advance Passenger Information and, where appropriate, return interactive responses in the form of passenger Board / No-Board decisions. This effectively extends your border control to the passenger's point of departure. Interactive API decisions are based on targeting and intelligence rules that are configured to meet client needs and dynamic threats.

Passenger Name Record (PNR)

Passenger Name Record (PNR) and Specific Transport Types (STT) entries are supported and can receive information from carriers on various transport modes, with automatic data conversion.

Targeting and Intelligence

The system supports many types of watch lists; for example identifying Persons of Interest and passengers on No-Fly lists. Green lists allow registered travellers and Visa holders to be efficiently and speedily routed, while configurable Business Rules can be defined to target potential threats and problems. The system also highlights trends using various types of travel formats.

Targeting Centre

Support staff can view the entire Border Operation, reviewing staff levels, passenger counts, problems and threats; any potential threats and problems are evaluated – in-real time – before a passenger boards.

Interpol Checks

API data can be cross-checked against Interpol's databases to prevent passengers with stolen or fraudulent passports from traveling. Interpol can also be cross-checked for any domestic travel if required.

Checkpoint Types

The following devices are available for use at both International and Domestic checkpoints:

- Mobile scanners;
- Fixed control;
- Electronic gate.

Board of Directors

Senior management team / PLC Board

Rt. Hon. Sir Tony Baldry
Non-Executive Chairman

Sir Tony has had a long a prestigious Parliamentary career. He was Personal Aide to Margaret Thatcher in the 1974 General Election and subsequently remained in her private office when she became Leader of the Opposition.

Sir Tony served as MP for North Oxfordshire from 1983 to 2015. He held various ministerial posts during the 1990s, serving as Minister of State in the Ministry of Agriculture, Fisheries and Food and as Parliamentary Under Secretary of State in the Foreign and Commonwealth Office, with a range of responsibilities including South Asia, Africa, North America and the West Indies.

Sir Tony, a practicing barrister, was awarded the Robert Schumann Silver Medal for contribution to European politics in 1975. He takes a keen interest in foreign affairs and was a Governor of the Commonwealth Institute and a member of the Overseas Development Institute. Tony was Chairman of the House of Commons Select Committee on International Development in the 2010 Parliament.

Peter Fowler
Chief Executive Officer

Peter has over 40 years' experience operating within the security industry, with particular reference to the electronic protection sector. Peter started his career in the security industry in 1970, quickly progressing into senior management roles and has a long history of running successful companies having built and sold two security businesses, successfully carried out acquisitions and disposals and has held several senior positions in listed companies.

Peter joined Westminster as Managing Director in 1996, carried out an MBO of the business in 1998 and led the IPO on AIM in 2007. He is widely travelled and has developed an extensive network of contacts around the world, having met numerous senior governmental and military personnel in many of the countries in which Westminster operate.

Mark L W Hughes
BSc MBA FCA
Chief Financial Officer

Mark is an experienced Group Chief Financial Officer with over 30 years' experience in leading financial organisations, banking and corporate finance teams worldwide including in high growth and emerging markets.

Mark is a fellow of the Institute of Chartered Accountants, holds and MBA from the University of Warwick and has an honours degree in Banking and International Finance.

Stuart Fowler BEng (Hons)
Chief Operating Officer

Stuart has many years' experience of the security industry and has been particularly involved in many of the more complex integrated security systems.

Stuart studied computing and business studies at university obtaining a Bachelor of Engineering Honours degree in 1996. After university Stuart successfully implemented several software development projects for listed companies before joining Westminster in 1998. Since that time Stuart has been instrumental in the design and implementation of many larger complex systems installed by Westminster and is now responsible for the Group's operations and technical implementation worldwide.

Simon Barrell
Non-Executive Director

Simon is a Fellow of the Institute of Chartered Accountants in England and Wales. Following qualification, he spent 4 years working in Nairobi and has since also gained considerable international experience with a number of organisations.

After 11 years in the profession Simon moved into the corporate world and has held various posts as Finance Director and has experience across multiple industries working in both the public and private sectors. He has also held numerous non-executive positions for a number of public companies and continues to act as an adviser to listed and non-listed companies. He is currently a non-executive director of SRT Marine Systems plc and Grafenia plc.

Simon is Chairman of the Audit Committee and a member of the Remuneration Committee, Nomination Committee and Disclosure Committee.

Major General (Retired) Graham Binns CBE DSO MC
Non-Executive Director

Graham Binns, is a highly decorated retired British Army officer with over 10 years' experience as a senior board level executive in the commercial security sector.

Graham served as General Officer Commanding 1st (UK) Armoured Division and then Commandant Joint Services Command and Staff College, retiring in 2010. He had previously commanded the 7th Armoured Brigade (the "Desert Rats") during Operation Telic 1 when the brigade took Basra in southern Iraq.

Following his military career, Graham was recruited as Chief Executive Officer of Aegis Defence Services Ltd. providing security services to governments and major corporations throughout the Middle East and Africa, with revenues of £300m and a staff of over 3,000.

Operational Board

Peter Fowler
Chief Executive Officer

Case study

Container screening - two Asian ports

Following changing local regulations two ports in an Asian country were looking to upgrade their security screening with new 7Mev container scanners.

Westminster were selected by both ports for the provision and on-going maintenance of two advanced containers screening solutions.

Westminster's solutions consisted of two fixed 7Mev portal x-ray scanners which were built, shipped and installed in the ports. Each scanners has the ability to scan up to 150 forty foot containers per hour and provides material discrimination to allow easy identification of organic substances such as drugs and explosives.

Case study

Managed services port screening - West Africa

Westminster Group Plc operate a managed service contract to exclusively provide port screening services at a container port in West Africa.

Following a lengthy evaluation process, a contract was awarded to Westminster to provide port screening services for an initial period of ten years, commencing 1 July 2021.

The 10+ year contract is based on Westminster's proven Build-Operate-Transfer managed services model, successfully deployed elsewhere around the world, under which governments and facility operators can upgrade their security operations at no direct cost.

Westminster will provide all the screening systems, warehousing and infrastructure required to undertake screening and intrusive search of import containers, maintain and operate the systems and provide comprehensive training services to customs and other staff throughout the term of the agreement.

Case study

Oil production facility

Westminster protects this important oil production facility from seaborne incursion by deploying a floating security barrier.

Westminster worked with the client to design various innovative solutions to protect the facility and the final design included the supply and installation of a 200m floating marine security barrier, one of a number of solutions from the company's extensive marine security portfolio of products and services.

"We will definitely continue to deal with Westminster International Ltd in the future and can certainly recommend them to anyone, particularly in countries such as Sudan."

PIETER STAPEL, HILTON KHARTOUM

Case study

Tower of London

Westminster is contracted to supply security services to help protect the historic Royal Palace and Fortress of the Tower of London.

The Tower of London is a world-renowned iconic castle and World Heritage Site, built by William the Conqueror in 1078, and has served as a Royal Palace, a fortress and a prison over the centuries.

Security of such a landmark building, which is open to the public, is paramount and Westminster has been contracted to provide inter alia, professional security services to the pedestrian and vehicular entrances.

"I am delighted our services division has been awarded this important new contract to protect what is one of England's most prestigious buildings."

PETER FOWLER, CEO

Case study

Palace of Westminster

Westminster has been contracted, for a minimum of 5 years, to replace and maintain the security screening equipment at the Palace of Westminster, together with the provision of other ancillary services.

The project includes the removal of existing systems and the installation and maintenance of new advanced X-Ray Screening and associated systems to screen people and baggage entering this iconic building.

Our business is focused on providing innovative and turn-key solutions that meet our customer requirements.

Case study

Managed services port screening - Ghana

The new Tema Container Port in Ghana, a \$1billion investment project by MPS, officially commenced operations on 28 June 2019.

Expanding the port's capacity from 1 million Twenty-foot Equivalent Units ('TEU') pa to over 3.5 million pa, creating a world-class container port operation with some of the largest and most advanced Ship-to-Shore cranes in the world. The port has advanced automated processing systems including the container screening solutions, ensuring that there will be 100% screening of all containers entering or leaving the port.

Westminster were selected as the Technical Partner for MPS as part of a 5 year renewable agreement. By deploying an expert team to the port and undertaking the recruitment, training and deployment of the screening personnel and the setup and management up of the screening offices, logistics and operations Westminster was able to quickly and efficiently bring the screening systems up to full capacity and maintain those systems providing Ghanaian Customs with the information they need.

Case study

United Nations mission in Sudan UNMIS

Westminster was awarded a major contract to provide a sophisticated electronic security surveillance system to protect the new United Nations premises in Khartoum, Sudan.

The project consists of a number of high performance surveillance cameras capable of observation, both internally and externally around the complex, in zero lighting conditions as well as in the extremes of the environmental weather experienced in the region.

The system, which will be undertaken by Westminster's specialist technicians based in the Sudan in association with Westminster's local agents, will provide a high level of security to the complex 24 hours a day against attempted intrusion, infiltration or terrorist activity.

The system is monitored and controlled from a sophisticated Control & Command Suite with all camera pictures and recordings available, via secure encryption, to the UN command network.

Case study

Canadian Nexen Petroleum

Westminster were awarded a contract for the supply of specialist long range perimeter fence detection solution to protect several of Nexen's production sites.

Westminster's specialist perimeter detection system can be fitted to perimeter fencing structures or covertly buried below the ground, providing very high levels of detection whilst advanced filtering technology eliminates most causes of false alerts.

The system is capable of monitoring tens or even hundreds of kilometres of perimeter or border fencing without the need for any 'in field' electronics, power supplies or analysers and yet can pinpoint the location of any incident to within a few metres.

The contract, which was managed in conjunction with Westminster's Middle East office involved several months work and was completed in 18 Months.

Case study

National Bank of Sudan

Westminster was awarded the prestigious contract to provide the extensive security systems and equipment required to protect the new Headquarters. Building against both criminal and terrorist attacks.

Westminster was chosen to provide the security protection services on the basis of superior design and performance criteria against fierce competition from a number of international companies.

The contract involved numerous electronic systems integrated into a common Control & Command suite including a Fire Suppression System, Intruder Detection Systems, Access Control, Perimeter Detection Systems, CCTV surveillance, Walk Through Metal Detection Gates, X-Ray Baggage Scanners, Flood Detection Systems, Time & Attendance Equipment & Entry Barriers etc.

Westminster, in addition to providing the electronic protection systems, also provided the vault doors and cash in transport equipment together with specialised fork lift trucks for use in the vault areas.

Case study

Complete Airport Security

Westminster was awarded the contract to take over the complete security operations within a West African International Airport.

The project is, a 15 year contract to provide the complete ground security services at the airport, including the perimeter security of the airport, passenger security throughout the terminal and passenger and baggage screening during check-in, security checkpoint and prior to boarding.

The project covers both the provision of the AVSEC security guard force, the development and implementation of robust and internationally recognised procedures and systems and the installation of state of the art detection and surveillance systems & equipment and the ongoing maintenance and upgrade of such.

As part of the contract Westminster deployed a highly experienced management team and took on the 100+ strong security team. Westminster have implemented advanced training programs to increase the knowledge and performance of all staff.

Westminster has also provided a dog detection team trained in the detection of explosives and narcotics quickly and effectively increasing the security of air travel. This deployment whilst not a requirement of the contract has been implemented by Westminster as a commitment to our vision of developing a internationally recognised standard of aviation excellence.

Case study

British Embassy Paris

The British Embassy Paris selected Westminster to provide a solution to physically secure the three entrances into their building from vehicular access.

Following a site survey, Westminster recommended that electrically operated, remote controlled rising bollards be sited at each entrance so as to create dual security of both an inner and outer security barrier to combat vehicle borne attacks.

Fixed static bollards provide additional protection from Vehicle borne improvised explosive device (VBIED) by keeping vehicles away from Vulnerable areas.

With the British Embassy occupying a strategic position in the centre of Paris aesthetics of the proposed solution was also a key consideration.

The security bollards, which are controlled by an entrance automation system, allow authorised personnel to enter safely and securely whilst maintaining security against unauthorised vehicle entry at all times.

Westminster's range of security bollards are designed and manufactured by engineers with significant experience in the fields of high security and access control. Security bollards are a highly dependable yet unobtrusive form of security which will easily interface with the wide range of security solutions offered by Westminster.

All of our bollards and blockers provide highly effective protection for high security establishments, iconic buildings, ports harbours, airports and critical infrastructure.

Case study

Covert Surveillance Vehicle

Westminster was awarded a contract from a African National Government to supply a number of bespoke mobile surveillance vehicles and equipment to assist with urban policing and state security.

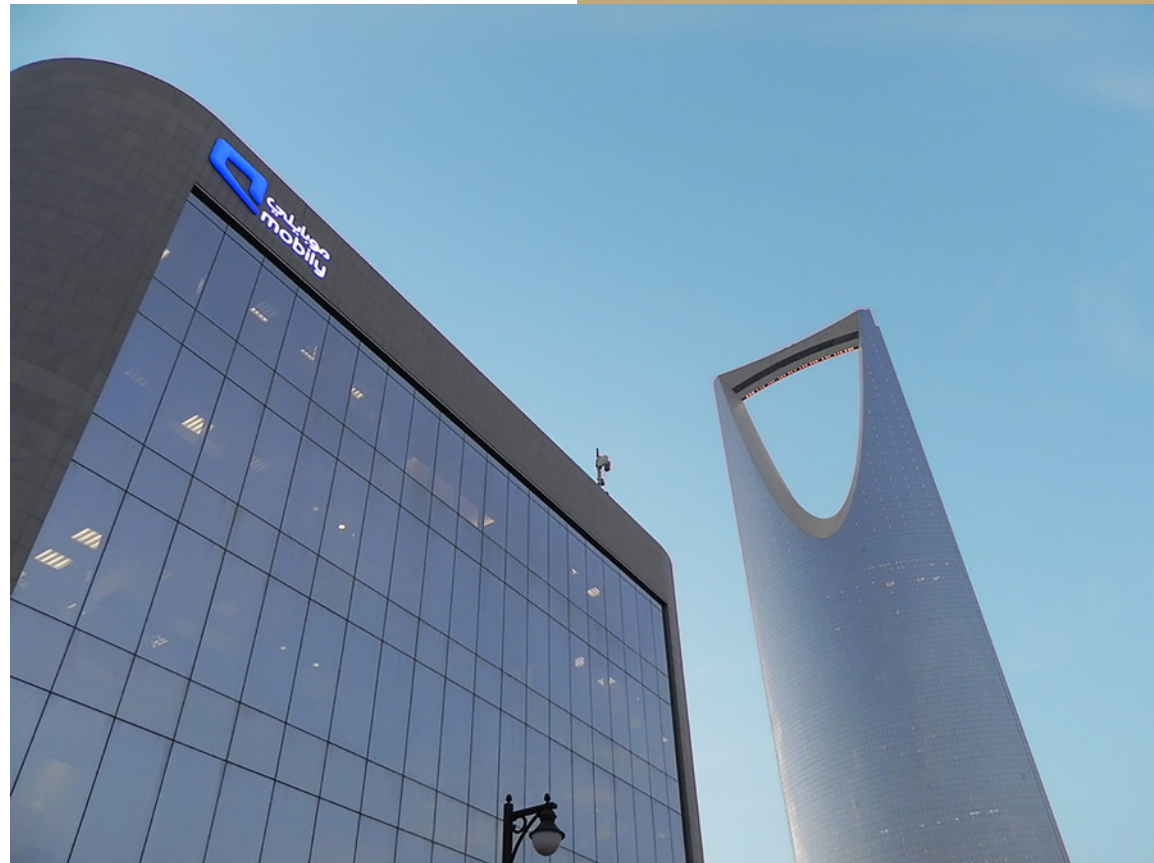

The vehicles which involve the deployment of a wide array of audio & visual surveillance, covert tracking and secure communication systems. These systems include covert vehicle mounted surveillance cameras, covert audio recording equipment two way van to operative communication systems with body worn surveillance cameras all transmitted in real time to the vehicle.

The interior of each vehicle is fully equipped to allow the monitoring of all audio and visual feeds as well as incorporating advanced tracking and security management software for detailed incident management. The vehicle is fully covert with the interior fully shielded from heat, RF and other interference and detection and is fully equipped with climate control.

As part of the contract Westminster has provided a state of the art Command & Control centre from which these vehicles and other security solutions are monitored and controlled.

The bespoke mobile surveillance vehicles are linked in real time with the control centre by fully mobile satellite communications allowing the Command & Control centre to fully manage operations from multiple vehicles simultaneously allowing for large scale policing operations to be effectively implemented.

Case study

Consultancy Services

Westminster was awarded an ongoing contract for several years from Mobily, part of the Etisalat group, Saudi Arabia to carry out a series of consultancy project for the Saudi Arabian mobile phone giant.

The consultancy projects focused on Mobily's infrastructure across Saudi Arabia covering hundreds of buildings and compounds both security and building management systems and the requirements for countrywide monitoring and reporting.

In addition Westminster have been requested to assist with the relocation of the HQ into their new prestigious complex consisting of three tower buildings. Looking at the existing security infrastructure and how this can be enhanced and expanded to suit their profile, including the deployment of security screening and additional advanced surveillance technologies.

Case study

Specialist Marine Security Net

Westminster was awarded a prestigious contract to protect the new Nagaa Hammadi Dam complex on the river Nile in Egypt.

The contract is to supply and install an advanced security net across the river Nile; to prevent access to the dam from either vessels or divers and to protect the hydraulic control structure from any floating or submerged objects.

The security net comprises a steel wire mesh with an advanced fibre optic detection cable attached. Any attempted attack on the net will signal an alarm and indicate the location of attack within the security control room. The net, spanning the entire width of the river Nile, will be fitted with an automatic gate which can be remotely opened and closed from within the control room.

The Westminster Group Foundation

Set up to provide support to the developing regions of the world. Providing support in the countries of the world in which the Westminster Group Plc operates.

- ✓ The prevention or relief of poverty
- ✓ The advancement of education
- ✓ Preservation and protection of health
- ✓ Providing grants, items and services

Origin

Westminster Group Foundation was formed in 2014 as an initiative of Westminster Group plc. Having worked for many years in the developing world and having already provided goods & services to local charities and organisations this was formalised through the formation of Westminster Group Foundation.

Mission

The prevention or relief of poverty, the advancement of education and the preservation and protection of health worldwide by providing: grants, items and services to individuals in need and/or charities, or other organisations working to prevent or relieve poverty, advance education or preserve and protect health.

Support

We work with local partners and other established charities to provide goods or services for the relief of poverty or advancement of education or healthcare in the developing world.

The Foundation is supported by the Westminster Group and its many customers and suppliers.
